Funded by the EC Inco-Copernicus Programme the EPIC project: i) collated information relating to the environmental transfer and fate of selected radionuclides through aquatic and terrestrial ecosystems in the Arctic; ii) suggested reference Arctic biota; iii) develop a set of reference dose models for reference Arctic biota; iv) compiled of data on dose-effects relationships and assessments of potential radiological consequences for reference Arctic biota. The project worked closely with the FASSET consortium developing some joint databases.

Reports by the EPIC consortium (Many of the EPIC outputs were superseded by those of the ERICA project). EPIC papers and reports
