

Funders

Sponsored by Government, the **Biotechnology and Biological Sciences Research Council** annually invests around £470 million in a wide range of research. Insect Pollinators Initiative projects support BBSRC's aim to fund high quality research that underpins future food security. Research in areas as diverse as the genetics of disease susceptibility in honeybees through to the role of pollinating insects in whole farm systems, will help to provide a secure supply of insect pollinated crops in the future.

Defra funds a bee health programme to protect honey bees from diseases and pests. It also helps fund the National Bee Unit, which carries out research and development to support beekeepers, farmers, and growers. Defra recognises that bees, butterflies and other insects are vital for the pollination of agricultural and horticultural crops and wild plants, and so are crucial to the UK's wider biodiversity, environment and food security interests.

The Scottish Government (SG) is the devolved legislature in Scotland with responsibility for bee health, biodiversity and agriculture.

The Scottish Government has a commitment to protect and improve the health of honey bees, and to a sustainable natural environment as a result of a thriving and healthy population of pollinators.

A screenshot of the 'Living With Environmental Change' website. The page is titled 'Insect Pollinators Initiative' and is part of the 'Current Activities' section. The main content area contains several paragraphs of text, including sections for 'The problem' and 'The initiative'. The right-hand side of the page features a 'RELATED TO CHALLENGE' section with a 'Resources challenge' link, and a 'FOLLOW US!' section with social media icons for Newsletter, Facebook, Twitter, and YouTube. The website has a green header with the logo and a navigation menu with links for Home, Challenges, Activities, Resources, People, Events, News, Contact, and About. A search bar is also present in the navigation area.
