

EPIC

Environmental protection from ionising contaminants in the Arctic (EPIC)

Funded by the EC Inco-Copernicus Programme the EPIC project: i) collated information relating to the environmental transfer and fate of selected radionuclides through aquatic and terrestrial ecosystems in the Arctic; ii) suggested reference Arctic biota; iii) develop a set of reference dose models for reference Arctic biota; iv) compiled data on dose-effects relationships and assessments of potential radiological consequences for reference Arctic biota. The project worked closely with the [FASSET](#) consortium developing some joint databases.
