

A few tips for using the wiki

Navigating

Use either left hand index, 'thread' links in green bar at top of page or the back arrow in your browser.

Printing

Select [Print](#) from [File](#) dropdown

External links

Currently selecting any external link will take you to the linked website (i.e. it will not open a new window).

Therefore to get back to the wiki you need to click your browsers back arrow.

Alternatively you **(and the recommended option)** can open links in a new window by left clicking on the link and selecting [Open Link in New Window](#)

Referencing a page

If you want to reference a page, for instance as the source of a report do not use the web address shown above instead from the [Tools](#) drop down select [Inf](#) and then copy the *Tiny Link* address

Ask a question or make a comment

Select [Ask a question](#) from left hand index and follow the instructions
