

Introduction to topics covered during the courses

Introduction to topics covered during the courses

The training courses cover the various elements of a radiological environmental assessment focusing on the ERICA Tool.

To help attendees we have prepared some background information to give a basic overview of each topic and also provide key references for further reading:

- [Introduction to environmental radiation protection](#) - Updated June 2018
- [Transfer models within radiological environmental assessment tools](#) - Updated March 2014
- [Radiation Effects on plants and animals](#) - Updated March 2014
- [Setting and using benchmarks in radiological assessments of the environment](#) - Updated June 2018
- [Dispersion modelling: ERICA methodology and optional alternatives](#) - Updated March 2014
- [Radiation dosimetry for animals and plants](#) - Updated March 2014
- [Details of ERICA Tool version 1.2 \(substantial updates\) released November 2014](#) - Added November 2014
