

Radiological protection of the environment - sharing knowledge

Introduction

It is now generally accepted that there is a need to explicitly demonstrate that the environment is protected from authorised discharges of radioactive substances. In response a number of assessment tools (models) have been developed. As the need for environmental assessment increases there is a requirement to ensure that regulators, industry and their representatives are:

- conversant with assessment objectives
- know how to use available tools
- can interpret the results
- understand the implications of how the tools are used

We have developed training packages on radiological environmental assessment aimed specifically aimed at regulators and industry and those who may conduct assessments on their behalf. The courses are lead by the Centre for Ecology & Hydrology with collaborators from the University of Stirling and University of Salford. The training programme is focused towards the use of the [ERICA](#) Tool however we also consider other approaches.

To date we have run training courses in United Kingdom, Australia, South Africa and Monaco; see [Training courses - schedule & details](#) for further information and feedback from participants.

Radiological Protection of the Environment training courses

For further details and to register your interest:

- [Radiological protection of the environment training course - ERICA \(ONLINE\)](#)
- [Radiological protection of the environment REFRESHER training course - ERICA \(ONLINE\)](#)

If you would like to be added to the training courses mailing list contact Dr Ingo Schüder via UKCEHtraining@ceh.ac.uk

We can also organise bespoke training courses tailored to your needs

We have ran courses in the UK, Australia and South Africa which were attended by participants representing organisations such as national and state regulators, the uranium mining industry and consultants. The courses were an adaptation of those we have run in the UK, but, focused to more local interests with associated practical exercises.

If you would like us to organise a similar course for you please contact Dr Ingo Schüder via UKCEHtraining@ceh.ac.uk

You can see the questions people have asked on environmental assessment together with our answers here [Questions & Answers](#)

Comment on future revision of the ERICA Tool

The [STAR](#) consortium includes a number of the organisations who developed the ERICA Tool. It is intended that the ERICA Tool will form a component of the screening tier tool for conducting combined human and non-human assessments to be developed by STAR. Consequently, the STAR consortium will collaborate in the forthcoming update of the ERICA Tool anticipated to be released in autumn 2013. This update will take into account: lessons learnt during model inter-comparison exercises (e.g. the IAEA EMRAS programmes and the EURATOM PROTECT project), user feedback, and recent evaluations. See [here](#) for details and feedback form.

The Radioecology Exchange

STAR is an EC EURATOM funded project with objectives to integrate radioecology programmes in key European organisations, develop joint training programmes, manage and disseminate knowledge and conduct a focused research programme.
